

Abstract

The invention relates to a device for providing a drink from extracts, in particular tea extracts, comprising at least one container for an extractable mixture which is at least partially permeable to drink and which container comprises at least two container parts pivotally connected to each other, a cover connected to the container, which cover comprises at least two cover parts pivotally connected to each other, wherein each cover part is pivotally connected to a separate container part. The invention also relates to a cover for use in such a device. The invention further relates to a container for use in such a device.
